Temperature controller

APAR

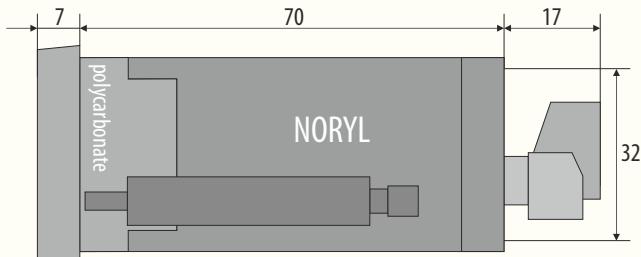

Single-channel temperature controller

- 1 universal measuring input (supporting thermometer, thermocouple or digital probes of temperature AR182 and AR183)
- control start/stop, keyboard lock
- 1 output, relay or SSR, ON-OFF with hysteresis, PID, PID AUTOTUNING
- advanced function of selecting PID parameters
- LED display with adjustable brightness
- line resistance compensation for resistive sensors
- temperature compensation of cold ends of thermocouples
- programmable input type, regulation and access options and other configuration parameters
- access to configuration parameters protected by a user's password
- methods of parameters configuration:
 - from the keypad on the controller front panel
 - via RS485 or AR955 programming device and ARSOFT-WZ1 freeware (Windows 2000/XP/Vista/7)
- software and programmer device which allows viewing the measured value and a quick configuration of single or ready-to-use parameter sets previously saved in the computer to be reused, for example in other controllers of the same type (configuration duplication)
- panel housing, IP65 from the front
- high accuracy, long-term stability and immunity to disturbance
- wide range of supply voltages: 15 ÷ 250 Vac (alternating voltage 50/60 Hz), 20 ÷ 350 Vdc (direct voltage)
