

AR651

Temperature controller

APAR

Single-channel temperature controller

- 1 universal measuring input (supporting thermometer, thermocouple or digital probes of temperature AR182 and AR183)
 - programmable BIN input for changing the controller's operating mode: control start/stop, keyboard lock
 - 1 output, relay or SSR, ON-OFF with hysteresis, PID, PID AUTOTUNING
 - automatic section of PID parameters function
 - LED display with adjustable brightness
 - line resistance compensation for resistive sensors
 - temperature compensation of cold ends of thermocouples
 - programmable input type, regulation and access options and other configuration parameters
 - access to configuration parameters protected by a user's password
 - methods of parameters configuration:
 - from the keypad on the controller front panel
 - via RS485 or AR955 programming device and ARSOFT-WZ1 freeware (Windows 2000/XP/Vista/7)
 - software and programmer device which allows viewing the measured value and a quick configuration of single or ready-to-use parameter sets previously saved in the computer to be reused, for example in other controllers of the same type (configuration duplication)
 - panel housing, IP65 from the front
 - high accuracy, long-term stability and immunity to disturbance
 - wide range of supply voltages: $15 \div 250$ Vac (alternating voltage 50/60 Hz), $20 \div 350$ Vdc (direct voltage)
